Experience

Generative AI Engineer, EncureIT Systems – Pune, India Aug 2025 - Present

AI Sales-Training & Call-Grading Platform

- Architected and shipped an end-to-end AI coaching platform solo on async FastAPI, PostgreSQL, and Pinecone, owning design and delivery.
- Built an LLM roleplay agent (chat + real-time voice via OpenAI Realtime API) that plays the buyer, coaches in-line, and grades reps — grounded in a RAG knowledge base with tool-calling and both short-term and long-term memory (LLM extraction, summarization, semantic retrieval) for personalized sessions.
- Engineered an automated call-grading pipeline: ingests recordings from RingCentral, transcribes via Deepgram, grades with GPT-5.5 (migrated from GPT-5), and writes quality scores + flags back to Podio and GoHighLevel (GHL) CRMs (multi-tenant), for GHL, transcripts are pulled directly and graded without the RingCentral recording step.
- Designed a leaderboard scoring engine ranking reps weekly/all-time on a 3-dimensional blended score with recency decay and source weighting, plus a gamification layer (streaks, badges, weekly challenges) refreshed by a daily scheduled job.
- Created a multi-stage drill recommender (pillar scorecards → leak detection → weakest-pillar ranking) surfacing targeted drills per rep, a manager call-flagging dashboard, and a metered credits billing ledger.
- Deployed via Docker/Nginx on AWS EC2 with S3 and GitHub Actions CI/CD; partnered with a frontend engineer to cut dashboard load time 60% through rendering and backend optimizations.

Ad Performance Assistant (Discord)

- Built a personal-assistant AI agent using OpenClaw and the Anthropic API (used Gemini API as fallback), embedded in the client's Discord server with dedicated channels per ad platform plus a cross-platform channel, so the client could ask natural-language questions about individual or aggregated Google Ads, Meta Ads, and Google Analytics performance.
- Integrated Windsor.ai to pull and unify cross-platform ad and analytics data, feeding it to the agent for real-time Q&A.

Client & Product Ownership

- Served as the primary point of contact for AI product clients, ran discovery and demo calls, translated requirements into product decisions and supported lead conversion for prospective AI clients.

Software Engineer (ML) intern, Cognitiveview – Bhubaneswar, India Dec 2024 - Mar 2025

- Created a compliance-related platform with multiple features and vendor integrations for ML applications. This platform is publicly recognized by the company as a "game-changing breakthrough in AI governance".
- Co-created an agent for CognitiveView platform using LangGraph.

Generative AI Engineer, Parentlycare – California, USA (Remote from Rourkela, India) May 2024 - Oct 2024

- Optimised the architecture by shifting from an agentic framework (CREW AI and llama 3, 8B) to simple LLM calls using llama3.1, 70B, effectively utilizing prompting techniques and reducing the overall output generation time by 35%.
- Incorporated memory into the system, enhancing the response contextuality.
- Created the PostgreSQL database and django based backend for the app from scratch.

Freelance Data Scientist, Self Employed – Rourkela, India Jun 2022 - Sept 2023

- Delivered a voice-enabled motion sign language detection system for a client: extracted pose, face and hand landmarks per frame with MediaPipe Holistic and OpenCV, built a labelled dataset of webcam sequences across 8 signs, and trained a stacked LSTM that reached 84% accuracy against a 54% SimpleRNN baseline. Shipped the model as a real-time application with a 30-frame rolling buffer, confidence thresholding and multi-frame

consensus smoothing to suppress flicker, achieving sub-70 ms per-prediction latency, and added text-to-speech output with live Spanish and German translation.

- Built an NLP based chatbot and recommendation engine using K-Nearest Neighbors with cosine similarity, leveraging webscraping with Requests and BeautifulSoup to gather movie data, delivering tailored movie suggestions and interactive user engagement.
- Managed a four-person team to develop a customer acquisition app for a prestigious Rourkela hospital. As the primary client liaison, ensured seamless communication and project delivery, and led the design and implementation of the data analysis component of the application.

Data scientist, Invincix Solutions Pvt. Ltd.– Bhubaneswar, India Jul 2021- May 2022

- Updated the pre-existing recommendation system for a client to recommend using some important data like price and model number.
- Created a GAN for a client that generates faces.
- Created a face recognition system for Invincix employees for easier attendance.

Education

Vellore Institute of Technology, Chennai, Master of Computer Applications July 2023 – May 2025

Rourkela Institute of Management Studies, Bachelors of Computer Applications July 2018 – Sept 2021

Skills

Python, pandas, numpy, matplotlib, seaborn, scikit-learn, tensorflow, LangChain, LangGraph, django, flask, fastapi, AWS, PostgreSQL, Opik, OpenClaw, Data Analysis, Data Science, Machine Learning, Deep Learning, Natural Language Processing, Image Processing, Generative AI, LLM, Prompt Engineering, RAG, AI Agents, Adaptability, Flexibility, Team work
